

ENVIRONMENTAL POLICY

OUR OBJECTIVE

To deliver environmentally sustainable projects

WHY

Our expertise is rehabilitating, remediating, maintaining, and preserving industrial structures. This capability allows us to provide a real, measurable, and positive impact on the environment. We know that sustainable projects will provide long-term benefits for our environment, our communities, our customers, and our business

TO ACHIEVE THIS WE WILL

- Communicate our Environmental Policy to all employees and relevant stakeholders
- Maintain operations that reflect applicable legal and other subscribed requirements, and standards
- Provide training for all employees and subcontractors with regard to our environmental objectives
- Develop and implement an educational programme on environmental awareness that will be disseminated to all employees and subcontractors
- Prevent adverse impacts resulting from our activities, products and services
- Optimize materials usage, conserve resources and energy, and prevent wastage on all sites
- Commit to ensuring all work sites are maintained to prevent unacceptable risks to employees and the environment
- Implement a system aimed at protecting the environment and preventing pollution as part of continual improvement
- Provide solutions that increase the service life of structures and reduce the burden and impact of resources on the environment
- Invest in, develop and identify methods to provide innovative, more efficient and longer lasting solutions

To achieve standards of environmental performance that clearly demonstrate our commitment to environmental care, a system has been implemented in accordance with Australian Standard AS/NZS ISO 14001
